Murli Khaire

Software Development Engineer

Bangalore, India | murlikhaire28@gmail.com | +91-8462858556 | murli-khaire | git-murli-khaire

Summary

Java backend engineer with **3 years** of experience building **Spring Boot microservices**, **Kafka** event-driven pipelines and **Redis**-backed services on **Kubernetes (GCP)**. At ConvoZen (NoBroker's AI subsidiary), I build the platform that processes **800K+ calls/day** at **99.9% uptime** for 20+ enterprise clients across automotive, edtech, real estate and BFSI. Comfortable owning distributed systems end to end, from multi-tenant APIs and auth to high-throughput pipelines and LLM integrations.

Technical Skills

Languages: Java • Python • SQL • Bash

Backend: Spring Boot • Microservices • REST APIs • GraphQL • Hibernate/JPA • Kafka • Redis • Elasticsearch

Data & Infra: MySQL • MongoDB • Docker • Kubernetes • GCP • Prometheus • Grafana

AI/ML: Google Gemini • Azure OpenAI • Vertex AI • RAG • LLMs • Speech Recognition • Sentence Transformers • NLP Pipelines

Architecture: CQRS • Event Sourcing • Saga Orchestration • OAuth2 • RBAC • Distributed Systems • Multithreading

Experience

Software Development Engineer – Backend, ConvoZen.ai (NoBroker) – Bangalore — Apr 2024 – Present

- **Platform (V2):** Contributed to platform re-architecture — consolidated **300+ Kafka topics** into a clean routing system using **CQRS, event sourcing, and saga orchestration**.
- **Multi-tenant Backend:** Built unified **Spring Boot** multi-tenant backend (`app.convozen`) replacing per-client Django instances, achieving **70% infrastructure cost reduction**.
- **Call Pipeline:** Architected Kafka-based call analysis pipeline on **Kubernetes** with horizontal pod autoscaling, processing **800K+ calls/day**; implemented priority queues achieving **p95 latency of 10 minutes** for time-sensitive clients.
- **Job Server:** Built multithreaded job server with **Spring Boot** and Kafka, achieving **60% efficiency boost** through optimized consumer group partitioning and parallel batch processing.
- **Security & Auth:** Built `app.convozen` from the ground up — implemented **JWT**, Redis-backed sessions, **OAuth2 with PKCE**, and a three-tier **RBAC** system for role management across all enterprise accounts.
- **Speech Pipeline:** Owned multi-speaker transcription with client-specific **Conformer** model routing and **Whisper** fallback for multi-language speech-to-text.
- **AI Analysis:** Built automated summarization, sentiment analysis, intent detection, and custom parameter extraction using **Google Gemini** and **Azure OpenAI**; reduced API costs by **40%** via intelligent batching.
- **QA & Insights:** Developed automated quality scoring against configurable rubrics, moment detection for emotional peaks and key phrases, and a **RAG-based** Customer Insights bot for natural-language querying of call transcripts; also built a RAG **WhatsApp chatbot** for the Odisha government.
- **Storage Optimization:** Migrated non-search workloads from Elasticsearch to **MongoDB** with TTL-based 6-month retention, cutting storage costs and query latency.

Full Stack Web Developer (Intern), Masai School – Bangalore — Oct 2023 – Mar 2024

- Built backend features and **REST APIs** for the Masai School student platform using **Java** and **Spring Boot**, working across API design, database integration and frontend screens.

Education

MCU Bhopal, Bachelor of Computer Application — Jul 2018 – Jun 2021

Masai School, Full Stack Web Development (Full-Time) • Prompt Engineering Certification — Oct 2022 – Oct 2023
